

ONBOARDING YOUR AI CREW

Course Overview & Field Guide

Welcome to Create Your AI Crew. Over the next 45 to 90 minutes, you will step into the role of Captain—moving beyond default AI prompts to design, test, and orchestrate a customized crew of AI counterparts tuned to how you actually think and create.

Expanding What Your Work Can Become

If you have ever sensed that AI could be more powerful, yet find it continually falling short of what you actually need, imagine having a crew of counterparts you designed yourself—each tuned to a different phase of your creative rhythm, ready to bring out your finest thinking.

Imagine carrying that crew across any AI platform you choose, so you always have a trusted collaborator beside you that understands your context, protects your standards, and lets you effortlessly switch who is at the table as your work evolves.

The 5-Module Arc

1. Set Your Intention

Ground a meaningful, active project where you have skin in the game. Clarify your heading and configure your first custom counterpart around one of six core intentions: Discovering, Ideating, Clarifying, Amplifying, Strengthening, or Preparing.

2. Try Your First Crew Member

Step into your preferred AI platform, run 10 to 20 substantive turns on your real deliverable, and practice active steering techniques to keep the exchange sharp and aligned with your goals. Refine the fit until it feels like a tailored outfit designed for your natural stride.

3. Use Two Crew Members in One Chat

Work naturally shifts gears as it matures. Map your personal 3-to-7-step workflow, identify a different phase calling for a different posture, and build your second crew member to complement the first. Bring both into a single conversation thread—calling on each counterpart by name as your project moves forward.

4. Take Your Crew to Other AI Platforms

Your thinking belongs to you across every tool you touch. Package an active continuity brief of your in-flight work and carry your crew profile across platforms—Claude, Gemini, ChatGPT, Microsoft Copilot, or FYI. Experience firsthand how different models bring complementary textures to your team.

5. See the Framework & What's Next

Step back to reveal the 5-phase Manifesting Framework (Focus !' Hold the Moment !' Spark !' Riff !' Manifest) that guided your progress. With your foundation established, choose your next steps freely across ongoing practice or advanced capability courses, backed by permanent ownership of your profiles.

What You Will Walk Away With

- **Two Tailored Crew Members**

Custom-built counterparts configured around your real projects, strengths, and communication style.

- **Single-Thread Multi-Crew Collaboration**

The practical capability to switch between different specialists within the same conversation without losing context or momentum.

- **True Multi-Platform Portability**

A universal setup you can bring directly into Claude, Gemini, ChatGPT, Microsoft Copilot, FYI, or almost any AI platform.

- **The Continuity Brief Habit**

A repeatable technique for packaging active project context and transferring it seamlessly between tools.

Operating Principles for Captains

1. You are the Captain; Your Configuration Profiles Are the Crew

The AI never directs your life or work. The initial spark, direction, discernment, and final validation always belong to you. Each AI crew member supports your ideas in ways that work best for you.

2. Skin in the Game

Counterparts only come alive when working on projects with real personal stakes and energy. Sterile or hypothetical exercises produce flat, generic outputs.

3. The Pace Is Yours

This course is deliberately unhurried. You can complete it in one continuous 45–90 minute session or pause and return whenever you want. Your conversational state and canvas artifacts persist across visits.
